Indications For Use

The PowerGlide™ Midline Catheter is inserted into a patient’s vascular system for short-term use (<30 days) to sample blood or administer fluids intravenously. These catheters may be used for any patient population with consideration given to adequacy of vascular anatomy and appropriateness of the procedure. The PowerGlide™ Midline Catheter is suitable for use with power injectors.

PowerGlide™ Midline Catheter Contraindications

This device is contraindicated whenever:
- The presence of device-related infection, bacteremia, or septicemia is known or suspected.
- The patient’s body size is insufficient to accommodate the size of the implanted device.
- The patient is known or is suspected to be allergic to materials contained in the device.
- Past irradiation of prospective insertion site.
- Previous episodes of venous thrombosis or vascular surgical procedures at the prospective placement site.
- Local tissue factors will prevent proper device stabilization and or access.

Therapies not appropriate for midline catheters include those therapies requiring central venous access. Refer to standards of practice and institutional policies.

Care and Maintenance

- Dressing Change Recommended:
  - Every 5-7 days or per facility protocol
- Flushing
  - 10 mL sterile normal saline after each use or every 12 hours or per facility protocol.
- Catheter removal
  - Remove slowly and do not use excessive force.
  - Use warm compress if needed

Please consult product labels and inserts for any indications, contraindications, hazards, warnings, cautions and instructions for use.
