Additional Instructions for Use of Power-Trialysis* Alphacurve* Short-Term Dialysis Catheter

The following instructions are to be used in conjunction with the primary Power-Trialysis* catheter instructions for use and facility protocols.

**Indications for Use / Contraindications:**
Consult primary Power-Trialysis* short-term catheter Instructions for Use for catheter indications for use and contraindications.

**Possible Complications:**
Consult primary Power-Trialysis* short-term catheter Instructions for Use for possible complications.

**WARNING:**
For optimal product performance and to avoid complications, do not insert any portion of the curve into the vein.

**Placement Instructions:**
When placing the catheter, use the removable suture wing to minimize movement at the exit site.

a) Using your fingers, squeeze the suture wing together so that it splits open around the catheter near the venipuncture site.

**WARNING:**
Placing suture wing with split facing away from patient could result in loss of catheter securement.

b) Secure the wing onto the catheter by tying sutures around the wing using the suture grooves.

c) Secure the removable suture wing in place by suturing side holes or using adhesive wound closures.

An issued or revision date for these instructions is included for the user’s information. In the event two years have elapsed between this date and product use, the user should contact Bard Access Systems, Inc. to see if additional product information is available.

Revision Date: April 2012
